

30 days · 30 videos · 10 seconds each

Thirty consecutive days of 10-second video, with a generation prompt and four platform captions for each. Supersedes the alternating video/photo plan in [SOCIAL-30-DAY.md](#) — that one is still useful for the still images if you want to double-post.

Site: <https://bullionedgepro.github.io/bullionedge-pro/>

The one rule that decides whether this works

Never promise profit. Not "make money", not "guaranteed", not a P/L screenshot, not a win rate, not a hashtag implying any of them.

Three reasons, in rising order of what they cost you:

1. It is an advertising offence in most jurisdictions, including the UAE, UK and US.
2. It contradicts the product. The app refuses to make that claim about itself, and any customer who reads both notices.
3. Every scam account in this niche already talks that way. Sounding unlike them is the cheapest differentiation you will ever get.

The hooks below are *sharper* than get-rich copy, not softer. "A 75% win rate can still lose money" stops a scroll harder than "join my VIP signals", and unlike them, you can prove it.

Production rules

Never let the model generate text into the video. AI video renders convincing gibberish letterforms, and on a finance account that reads as a scam within one second. Every word on screen is typed by you afterwards, in CapCut, Canva, Premiere — anything.

SETTING

Ratio	9:16
Length	10s, loopable — last frame should sit near the first
On-screen text	Added in post. 3–7 words at a time, max 3 cards
Audio	Muted-first. Assume nobody hears it
Motion	One continuous camera move. No cuts inside 10 seconds
Faces	Optional. Hands, screens and objects outperform faces here

House style — paste this ahead of every prompt below

Cinematic 9:16 footage for a premium financial-software brand. Near-black background, #0A1214, with deep teal-green undertones. A single warm gold key light at low angle, #E0A63C, creating one clean specular highlight and long soft shadows. Shallow depth of field, 35mm anamorphic look, subtle film grain, no lens flare. One slow continuous camera move — no cuts. Colour palette restricted to near-black, teal-green, warm gold, and one muted red accent. Absolutely no text, no letters, no numbers, no logos, no watermarks, no user interface elements anywhere in frame. Calm, precise, unhurried mood — the opposite of hype. 10 seconds, seamless loop.

Which generator

Any of Veo, Runway, Kling, Luma or Sora handle these. If your tool has a **negative prompt** field, put this in it every time:

text, letters, numbers, words, watermark, logo, UI, charts with labels, distorted hands, extra fingers, fast cuts, lens flare, oversaturation, stock-footage smile, money, cash, luxury cars, mansions

That last line matters. Wealth-porn imagery in this niche signals scam faster than anything you could say.

WEEK 1 — The enemy is arithmetic, not analysis

Day 1 · "The chart was never the problem"

Prompt — Extreme close-up of a single brass balance scale on black stone. One pan holds a small dense gold cube; the other holds a scattered pile of tiny gold flakes that visibly outweighs it. Camera pushes in slowly along the beam as the scale settles. The heavy pan sinks with quiet finality.

TikTok — Your entries are fine. Your maths isn't. 🟡

30 days · 30 videos · 10 seconds each

#xauusd #tradingmistakes #goldtrading

Instagram — Most traders hunt for a better entry.

Position size, reward-to-risk and how often you trade decide far more than any entry ever will. Link in bio.

[#xauusd](#) [#riskmanagement](#) [#tradingdiscipline](#)

Facebook — Ask most struggling traders what they need and they'll say a better strategy. It's almost never the strategy. It's the size of the position and how often they take one. Which of those two do you actually track?

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#goldtrading](#) [#riskmanagement](#) [#xauusd](#)

YouTube

- *Title:* Your Entries Aren't the Problem — Your Position Size Is
- *Description:* The arithmetic that decides whether a gold strategy survives, in ten seconds. Free pre-trade desk for XAU/USD — analysis and journaling software, not a signal service.

<https://bullionedgepro.github.io/bullionedge-pro/>

- *Tags:* [gold trading](#), [risk management](#), [position sizing](#)

Day 2 · "A 75% win rate that loses money"

Prompt — Overhead shot of a dark table. Twelve small gold coins arranged in a neat row; nine stand upright, three lie flat. The camera drifts sideways along the row. As it reaches the end, the nine upright coins are revealed to be paper-thin discs while the three flat ones are thick heavy ingots.

TikTok — 75% of your trades win. You're still down. Here's why. 🍋

[#tradingpsychology](#) [#xauusd](#) [#riskreward](#)

Instagram — Nine wins and three losses can still be a losing month.

It depends entirely on the size of each. Win rate without R-multiple is a number that tells you nothing.

[#riskreward](#) [#goldtrading](#) [#tradingjournal](#)

Facebook — A 75% win rate sounds excellent until you learn the three losses were four times the size of the nine wins. Win rate on its own is one of the most misleading numbers in trading. Do you track yours alongside average R? 👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingtips](#) [#riskmanagement](#) [#forexeducation](#)

YouTube

- *Title:* How a 75% Win Rate Still Loses Money
- *Description:* Win rate without average R is meaningless — here's the arithmetic in ten seconds. Pre-trade checklist and journal for XAU/USD. <https://bullionedgepro.github.io/bullionedge-pro/>

- *Tags:* [win rate](#), [risk reward ratio](#), [trading maths](#)

Day 3 · "Six losses in a row is normal"

Prompt — A slow dolly along six identical dark doorways in a black corridor, each lit faintly from within by warm gold. Five are closed. The sixth stands open, light spilling across the floor. The camera does not stop or

slow — it passes them all at the same steady pace.

TikTok — Six losses in a row isn't bad luck. It's Tuesday. 🎵

[#tradingpsychology](#) [#losingstreak](#) [#xauusd](#)

Instagram — At a 50% win rate, a six-loss streak shows up roughly every 64 trades. It isn't a sign you're broken. It's a sign you're trading.

What matters is what you risked before it started.

[#tradingpsychology](#) [#riskmanagement](#) [#goldtrading](#)

Facebook — Every trader who quits does it during a losing streak they thought was abnormal. Six in a row at a 50% win rate is completely ordinary maths. The question was never whether it happens — it's what percentage you had on when it did.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingpsychology](#) [#discipline](#) [#goldtrading](#)

YouTube

- *Title:* Six Losses in a Row Is Normal — Here's What It Should Cost You
 - *Description:* Losing streaks are arithmetic, not judgement. What matters is the percentage you risked before it began. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* [losing streak](#), [risk per trade](#), [trading psychology](#)
-

Day 4 · "Lose 50%, need 100%"

Prompt — A gold sphere sits on black glass. It deflates smoothly to half its volume as the camera orbits. Then it begins re-inflating — visibly straining, much slower — and the shot ends before it regains its original size. Reflection on the glass throughout.

TikTok — Down 50% means you need 100% to get back. 🎵

[#drawdown](#) [#tradingmaths](#) [#xauusd](#)

Instagram — Lose half your account and doubling it only gets you back to even. This asymmetry is why capital preservation beats capital growth every single time.

[#riskmanagement](#) [#drawdown](#) [#tradingdiscipline](#)

Facebook — Drawdown maths is brutally asymmetric. Down 20% needs 25% to recover. Down 50% needs 100%. Down 70% needs 233%. This is the single strongest argument for small position sizes, and almost nobody teaches it.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#drawdown](#) [#riskmanagement](#) [#tradingeducation](#)

YouTube

- *Title:* Lose 50%, Need 100% — The Drawdown Maths Nobody Explains
- *Description:* Why recovery is always harder than the loss, and what it means for position size. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* [drawdown](#), [capital preservation](#), [trading maths](#)

Day 5 · "The trade you didn't take"

Prompt — A hand in shadow reaches toward a single glowing gold token on a dark surface, hesitates, and withdraws. The camera holds on the untouched token as the hand leaves frame. Nothing else happens. The stillness is the point.

TikTok — The best trade this week was the one I skipped. 🟡

#tradingdiscipline #patience #xauusd

Instagram — Nobody posts the trade they didn't take.

It doesn't screenshot well and it doesn't feel like anything. It's also where most of the edge lives.

#tradingdiscipline #patience #goldtrading

Facebook — There's no content in the trade you passed on. No screenshot, no story, no dopamine. And yet for most traders, the skipped trades are worth more than the taken ones. How many did you pass on this week?

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingdiscipline #patience #goldtrading

YouTube

- *Title:* The Most Profitable Trade Is Usually the One You Skip
- *Description:* Why the trades you pass on decide more than the trades you take — and why nobody talks about them. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* trading discipline, patience, trade selection

Day 6 · "Revenge trading has a shape"

Prompt — A slow spiral descent through concentric rings of dark polished metal, each ring lit by a thin gold line, each slightly tighter than the last. The camera accelerates almost imperceptibly as it descends. Ends looking into darkness at the centre.

TikTok — Loss. Bigger size. Loss. Bigger size. You know this shape. 🟡 #revengetrading

#tradingpsychology #xauusd

Instagram — Revenge trading follows the same curve every time: a loss, a larger position to fix it, a larger loss. Nobody decides to do it. They just don't have a rule that stops them.

#tradingpsychology #revengetrading #discipline

Facebook — Nobody plans to revenge trade. It happens in the twenty minutes after a loss, when the next position is quietly 3x the last one. A daily loss limit set the night before is the only thing that reliably stops it. Do you have one?

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingpsychology #discipline #riskmanagement

YouTube

- *Title:* Revenge Trading Has a Shape — And a Fix

- *Description:* The spiral looks the same for everyone. A pre-set daily loss limit is the only thing that reliably interrupts it. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* [revenge trading](#), [trading psychology](#), [daily loss limit](#)
-

Day 7 · "Gold doesn't care what you think"

Prompt — A large rough gold nugget on black sand, absolutely still. Wind moves the sand around it in slow streams. The camera orbits a full 180 degrees. The nugget does not move at all. Utterly indifferent.

TikTok — Gold has no idea you're in this trade. 🍷

[#xauusd](#) [#goldtrading](#) [#tradingpsychology](#)

Instagram — The market doesn't know your entry, your size, or how badly you need this one to work. Every argument you're having is with yourself.

[#xauusd](#) [#tradingpsychology](#) [#goldtrading](#)

Facebook — The market has no memory of your last trade and no opinion about your account. Everything that feels personal about trading is happening entirely on your side of the screen. That's uncomfortable — and it's also the good news, because your side is the side you can change.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingpsychology](#) [#xauusd](#) [#mindset](#)

YouTube

- *Title:* The Market Doesn't Know You're In This Trade
 - *Description:* Why every emotional battle in trading is happening on your side of the screen — and why that's good news. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* [trading psychology](#), [xauusd](#), [trading mindset](#)
-

WEEK 2 — The mechanism

Day 8 · "Ten factors, one score"

Prompt — Ten thin gold rods stand upright on black slate at varying heights. The camera tracks slowly past them at rod height; as it passes, each rod either illuminates from within or stays dark. Ends on a wide shot of the mixed pattern.

TikTok — Ten checks. One score. No opinions. 🍷

[#xauusd](#) [#tradingchecklist](#) [#goldtrading](#)

Instagram — Structure, liquidity, imbalance, order blocks, price action, higher timeframe, location, momentum, session, reward-to-risk.

Ten weighted factors, one score out of a hundred, and the reasoning shown in full — including the case against.

[#xauusd](#) [#smartmoneyconcepts](#) [#tradingtools](#)

Facebook — Most tools give you a signal and no reasoning. This one gives you a score out of a hundred and then shows exactly which of ten factors it counted, which it didn't, and what argues against the trade. You can disagree with it — that's the point.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingtools #xauusd #goldtrading

YouTube

- *Title:* Ten Factors, One Score — How the Pre-Trade Checklist Works
- *Description:* Structure, liquidity, imbalance, location, momentum and more — weighted into a single score with the reasoning shown in full. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* trading checklist, xauusd analysis, smart money concepts

Day 9 · "It says no more than it says yes"

Prompt — A heavy black steel gate in a dark wall, edged with a thin line of gold light. The camera approaches steadily. The gate stays firmly shut. At the last moment the camera stops, inches away. It never opens.

TikTok — Most days it just says no. 🟡

#tradingdiscipline #xauusd #notrade

Instagram — A tool that approves everything is a tool that does nothing. This one refuses the trade when news is close, the spread is wide, your daily limit is hit, or there's no sensible stop — no matter how good the setup looks. #tradingdiscipline #riskmanagement #xauusd

Facebook — The most valuable thing this software does is refuse. News inside your window, spread above your threshold, daily limit reached, no placeable stop — any of those and the answer is no, regardless of the score. Unglamorous. Also the whole point.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingdiscipline #riskmanagement #tradingtools

YouTube

- *Title:* The Feature Is Saying No
- *Description:* Hard stops that override the score entirely — news, spread, daily limits, no valid stop loss. Why refusal is the product. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* trading discipline, risk management, no trade

Day 10 · "Nothing here repaints"

Prompt — A gold line is drawn across black glass by an unseen point of light, moving left to right. Once drawn, the line is permanently fixed. The camera pans back along the completed line — every segment exactly where it was laid. Absolutely no redrawing.

TikTok — If an indicator looks perfect on history, ask when it drew that. 🟡

#repainting

#tradingindicators #xauusd

Instagram — Every level here is computed by walking candles forward, and appears only from the bar that confirmed it.

Not the bar it turns out later to have started on. That's the difference between a chart that's brilliant about the past and one that's useful now.

[#nonrepainting](#) [#priceaction](#) [#xauusd](#)

Facebook — Here's a test for any indicator you use: does a signal ever appear on a candle where it wasn't there in real time? If so, its backtest is fiction. Everything in this app is computed forward-only, which is why levels show up a candle or two later than you'd mark them by eye.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingindicators](#) [#priceaction](#) [#backtesting](#)

YouTube

- *Title:* Why Your Indicator Looks Perfect on History (And Fails Live)
- *Description:* Repainting explained, and what forward-only computation actually looks like on a chart.
<https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* [repainting indicator](#), [backtesting](#), [price action](#)

Day 11 · "Your stop comes from the chart"

Prompt — A gold pin is pressed into black volcanic rock just beyond a natural ridge in the surface. Camera moves low and lateral, showing the ridge between the pin and open ground. Dust settles. The pin holds.

TikTok — Your stop isn't 20 pips. It's wherever you're wrong. 🍷

[#stoploss](#) [#xauusd](#) [#riskmanagement](#)

Instagram — A stop placed at a round number is a stop placed at nothing. Here it sits beyond the level that would actually prove the idea wrong, padded by a fraction of ATR so ordinary noise can't reach it.

[#stoploss](#) [#priceaction](#) [#goldtrading](#)

Facebook — "I use a 20-pip stop" is not a strategy — it's a habit. A stop should sit beyond the price that would prove your idea wrong, and that level moves with the market. If your stop distance is always the same number, it isn't coming from the chart.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#stoploss](#) [#riskmanagement](#) [#tradingeducation](#)

YouTube

- *Title:* Your Stop Loss Shouldn't Be a Fixed Number
- *Description:* Where a structural stop actually belongs, and why ATR padding matters more than round numbers. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* [stop loss](#), [atr](#), [risk management](#)

Day 12 · "Three targets in one ATR is one target"

Prompt — Three gold markers stand on black sand. Camera pulls back steadily, and as perspective flattens the three markers visually converge into what appears to be a single marker. Then it keeps pulling back to reveal a fourth, far behind the others.

TikTok — Your three take-profits are the same take-profit. 🟡

#takeprofit #riskreward #xauusd

Instagram — Three targets stacked inside a single ATR aren't three targets. They're one target with extra steps.

Real targets come from real structure — opposite liquidity, an unfilled gap, a prior session high — and they need room between them.

#takeprofit #riskreward #goldtrading

Facebook — A common mistake: setting TP1, TP2 and TP3 so close together that a single normal move hits all three. That's not scaling out, it's one exit pretending to be three. Targets should come from actual structure and be spaced far enough apart to mean something different.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#takeprofit #tradingstrategy #riskreward

YouTube

- *Title:* Three Take-Profits Inside One ATR Is Just One Take-Profit
- *Description:* How targets should be drawn from structure and spaced — instead of stacked where they all trigger together. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* take profit, atr, trade management

Day 13 · "Proxy data, stated honestly"

Prompt — Two nearly identical gold ingots side by side on black velvet, lit so one has a faintly cooler cast. The camera moves in close on the seam between them. The difference is real but subtle — you only see it because they're adjacent.

TikTok — Our candles are a proxy. We say so on the screen. 🟡

#xauusd #tradingdata #transparency

Instagram — When true XAU/USD candles aren't available, the app uses a proxy series — and labels it *proxy*, right at the top of the screen.

The shape of the market is right. The exact decimals aren't. You should know which one you're looking at.

#xauusd #tradingtools #transparency

Facebook — Most tools don't tell you where their data comes from. This one labels its feed on screen and says plainly when it's a proxy rather than true XAU/USD — because the difference matters when you're placing a stop. You can also upload your own broker's chart and have it checked against the levels. 👉

<https://bullionedgepro.github.io/bullionedge-pro/>

#tradingdata #xauusd #transparency

- *Title:* Why We Label Our Own Data "Proxy"
 - *Description:* What proxy price data means for your stop placement, and why the app says so on screen instead of hiding it. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* `trading data`, `xauusd`, `price feed`
-

Day 14 · "It runs with the internet off"

Prompt — A single gold filament glows steadily inside a sealed glass dome on black stone. The room around it darkens completely until only the filament is visible. It doesn't flicker. Camera pushes slowly in.

TikTok — Wi-Fi died mid-analysis. Nothing happened. 📺

`#tradingapp` `#offline` `#xauusd`

Instagram — The analysis, the checklist, the sizing, the journal — all of it computed on your device. Feed drops, network dies, plane takes off: it still works. Your data never leaves your browser either.

`#tradingapp` `#privacy` `#goldtrading`

Facebook — Install it once and everything except the live price works with no connection at all. That's not a gimmick — it means your journal and your risk rules can't be taken away by an outage, a subscription lapse on someone else's server, or a bad hotel Wi-Fi.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

`#tradingtools` `#offline` `#privacy`

YouTube

- *Title:* A Trading Tool That Works With the Internet Off
 - *Description:* Analysis, sizing and journaling computed entirely on your device — install it and it runs offline. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* `offline app`, `trading journal`, `pwa`
-

WEEK 3 — The arithmetic

Day 15 · "Size comes from your loss, not your hope"

Prompt — A gold weight is placed on one side of a dark beam balance. On the other side, sand pours in until the beam levels exactly, then stops instantly. Camera holds on the perfect balance. Not one grain more.

TikTok — Lot size isn't a feeling. It's a subtraction. 📺

`#lotsize` `#positionsizing` `#xauusd`

Instagram — Position size should be worked backwards from the loss you can accept — never forwards from the profit you'd like.

Balance, risk percentage, stop distance. That's the whole calculation.

`#positionsizing` `#riskmanagement` `#goldtrading`

Facebook — Most traders pick a lot size that "feels right" and then hope the stop holds. It's the wrong direction. Start from the money you're willing to lose, divide by the distance to your stop, and the lot size falls out of it. No judgement required.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#position sizing #lot size #risk management

YouTube

- *Title:* Position Size Is a Subtraction, Not a Feeling
- *Description:* Work backwards from the loss you can accept. Free XAU/USD lot size calculator included. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* position sizing, lot size calculator, risk per trade

Day 16 · "The 2% line"

Prompt — A single thin gold line runs across black stone. A slow-moving shadow creeps toward it from one side, reaching the line and stopping precisely at it. Camera tracks along the line's length as the shadow holds its edge.

TikTok — Above 2% per trade, a normal streak ends you. 🟡

#risk per trade #trading maths #xauusd

Instagram — At 1% per trade, ten losses in a row costs about 10% and you're still trading. At 5%, the same streak costs 40% and you need 67% just to get back. Same skill. Different survival.

#risk management #risk per trade #drawdown

Facebook — The gap between risking 1% and 5% per trade isn't a difference in ambition — it's the difference between surviving an ordinary losing streak and not. Same strategy, same skill, completely different outcome. Where's your line? 👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#risk management #trading education #drawdown

YouTube

- *Title:* The 2% Line — Where Normal Losing Streaks Become Fatal
- *Description:* Same strategy, different risk per trade, completely different survival. The arithmetic in ten seconds. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* risk per trade, drawdown, trading maths

Day 17 · "R is the only unit that compares"

Prompt — Identical gold cubes of exactly the same size arranged in a precise grid on black slate. Camera cranes up slowly to reveal the grid's full extent. Absolute uniformity — every cube identical to every other.

TikTok — Stop counting dollars. Count R. 🟡

#rmultiple #trading journal #xauusd

Instagram — A \$40 win on a \$20 risk and a \$400 win on a \$200 risk are the same trade.

R-multiples let you compare across account sizes, instruments and years. Dollars don't.

[#rmultiple](#) [#tradingjournal](#) [#riskreward](#)

Facebook — Two traders both made \$500 last month. One risked \$100 a trade, the other risked \$2,000. Only one of them learned anything they can repeat. That's why serious journals record R-multiples, not currency.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingjournal](#) [#rmultiple](#) [#riskreward](#)

YouTube

- *Title:* Stop Counting Dollars — Count R
- *Description:* Why R-multiples are the only unit that lets you compare trades across accounts, instruments and time. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* [r multiple](#), [trading journal](#), [risk reward](#)

Day 18 · "The spread eats scalpers"

Prompt — A gold coin sits on black stone. Something unseen shaves an almost-invisible sliver from its edge, repeatedly, at a steady rhythm. Camera pushes in very slowly. By the end the coin is visibly smaller — but no single shave looked like anything.

TikTok — Twenty trades a day. The spread took all of it. 🍂

[#spread](#) [#scalping](#) [#xauusd](#)

Instagram — Gold's spread is wide and it widens further at the worst moments — news, rollover, thin liquidity.

Trade twenty times a day and the cost isn't a rounding error. It's the strategy. [#spread](#) [#scalping](#)

[#tradingcosts](#)

Facebook — Trading costs feel invisible because each one is small. Twenty trades a day at a widened gold spread adds up to a number most scalpers never calculate. The app refuses the trade outright when the spread is above your own threshold.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

[#tradingcosts](#) [#scalping](#) [#goldtrading](#)

YouTube

- *Title:* The Spread Is Eating Your Scalping Strategy
- *Description:* Why gold's spread costs more than most traders calculate, and how a hard threshold stops it. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* [trading spread](#), [scalping](#), [trading costs](#)

Day 19 · "News gaps jump your stop"

Prompt — A smooth unbroken sheet of black glass. Suddenly a section of it is simply *gone* — not shattered, just absent, a clean void where surface used to be. Gold light spills from the gap's edges. Camera drifts across the void.

TikTok — Your stop was at 4,350. It filled at 4,318. 🟡

#newstrading #slippage #xauusd

Instagram — A stop loss is an instruction, not a guarantee.

When a release gaps the market, price doesn't pass through your level — it lands on the other side of it. That's why the app refuses trades inside your news window.

#riskmanagement #newstrading #xauusd

Facebook — Everyone learns this the expensive way. A stop is an order to exit at the next available price, not a promise of your price. In a news gap the next available price can be far past your level. Trading through high-impact releases isn't brave — it's uninsured.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#riskmanagement #newstrading #slippage

YouTube

- *Title:* Your Stop Loss Is Not a Guarantee
- *Description:* What happens to a stop in a news gap, and why a blackout window belongs in your rules.
<https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* stop loss, slippage, news trading

Day 20 · "The calendar knows what it knows"

Prompt — Rows of small dark tiles on black stone. Some illuminate with a steady confident gold; others glow faintly and uncertainly; most stay entirely dark. Camera cranes slowly over the field. The dark tiles vastly outnumber the lit ones.

TikTok — Our calendar lists what it can prove. Nothing else. 🟡

#economiccalendar #nfp #xauusd

Instagram — Scheduled Fed decisions are known dates. Payrolls and claims are derived from published rules — first Friday, Thursdays — and labelled as derived.

Anything it doesn't know, it doesn't list. No plausible-looking invented rows. #economiccalendar #nfp #goldtrading

Facebook — Most economic calendars present everything with the same confidence, whether it's a confirmed date or a guess. Ours separates them into tiers and simply omits what it can't establish. Times are computed in US Eastern and converted, so they stay right across daylight saving.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#economiccalendar #tradingtools #xauusd

YouTube

30 days · 30 videos · 10 seconds each

- *Title:* An Economic Calendar That Admits What It Doesn't Know

- *Description:* Confirmed dates, derived dates, and the events we leave out rather than invent.
<https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* `economic calendar`, `nfp`, `fomc`
-

Day 21 · "Sessions aren't equal"

Prompt — A dark globe of polished obsidian rotates slowly. A warm gold band of light sweeps across its surface, brightening intensely over two regions and dimming almost to nothing between them. One full rotation.

TikTok — Same setup. Wrong hour. Different trade. 📺

`#tradingessions` `#londonession` `#xauusd`

Instagram — Gold behaves differently in Asia, London and New York — and differently again in the overlap. The same setup at 03:00 and at 14:00 is not the same setup. The engine weighs the session; your journal tracks which ones you actually win in.

`#tradingessions` `#goldtrading` `#xauusd`

Facebook — One of the most useful things a journal reveals is that your results cluster by hour. Most traders have one session they consistently do better in and one they should probably stop trading entirely — and almost none of them have checked.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

`#tradingessions` `#tradingjournal` `#goldtrading`

YouTube

- *Title:* The Same Setup at 3am and 2pm Is Not the Same Setup
 - *Description:* Why session matters for gold, and how to find out which hours you actually trade well.

 - *Tags:* `trading sessions`, `london session`, `gold trading hours`
-

WEEK 4 — Proof, objections, and the offer

Day 22 · "Six stages, in order"

Prompt — Six shallow steps carved into black stone, ascending. Each tread carries a thin inlaid gold line. The camera rises steadily alongside them, revealing that the top two steps are still unlit.

TikTok — Record. Risk. Discipline. Selectivity. Expectancy. Consistency. 📺 `#tradingjourney`

`#tradingdiscipline` `#xauusd`

Instagram — Six stages, and the order is not negotiable: record every trade, define your risk, hold your discipline, then get selective — and only then chase positive expectancy.

Your stage is the first one you *haven't* met, not the best one you ever touched.

`#tradingjourney` `#discipline` `#tradingjournal`

Facebook — Most traders try to jump straight to profitability and stall for years. The four habits underneath it — recording, defined risk, discipline, selectivity — are what make expectancy possible in the first place. The app measures which stage you're actually on from your own logged trades.

-

Day 23 · "Your emotions have a P/L"

Prompt — Three glass vessels on black stone, each holding gold liquid at a different level. Camera moves slowly past them. The fullest vessel is at the back, half-hidden, easy to miss.

TikTok — Your losses cluster in one mood. Want to know which? 🧐

[#tradingpsychology](#) [#tradingjournal](#) [#xauusd](#)

Instagram — Log how you felt before each trade for two months and a pattern appears that no chart will ever show you.

Most traders have exactly one emotional state that costs them almost everything. [#tradingpsychology](#)
[#tradingjournal](#) [#discipline](#)

Facebook — Record your emotional state before every trade for eight weeks and then sort your results by it. Almost everyone finds one state — bored, frustrated, over-confident — where their results collapse. It's the cheapest edge available and it costs nothing but honesty.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

-

Day 24 · "It won't tell you where price is going"

Prompt — A polished gold sphere reflects a dark room. The camera circles it looking for a view of what lies ahead, but every reflection shows only the room already behind. Ends on the sphere, revealing nothing.

TikTok — It won't predict gold. Nothing can. That's the feature. 🧐

[#tradingtools](#) [#honesty](#) [#xauusd](#)

Instagram — Ask it where gold is going and it declines.

Every number it produces comes from candles that already closed. Nothing is projected forward, because nothing can be.

#tradingtools #xauusd #nosignals

Facebook — There's a version of this product that predicts prices, promises a win rate and sells much faster. It would also be a lie. This one measures the setup in front of you against a fixed rulebook and enforces limits you set. That is genuinely all it does.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingtools #honesty #riskmanagement

YouTube

- *Description:* What analysis software can honestly do, and what no software can.
<https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* trading software, xauusd, not financial advice

Day 25 · "The assistant explains, it doesn't predict"

Prompt — A gold-rimmed magnifying lens hovers above black slate, drifting slowly over an intricate engraved pattern already cut into the stone. It magnifies what's there. It adds nothing.

TikTok — Ask it why. It answers. Ask it what's next — it won't. 🍷

#aitrading #tradingtools #xauusd

Instagram — Built-in assistant: ask why a setup was blocked, what would have to change, or where the weakest part of it is.

It explains what the engine measured. It never does the measuring, and any price it quotes that the engine didn't compute is flagged before you read it.

#aitrading #tradingtools #xauusd

Facebook — There's an assistant built in, and it's deliberately limited. It explains the analysis the engine already produced — it doesn't generate opinions about the market. Ask it where gold is heading and it'll point you back to the screen that measures what's actually there.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#aitrading #tradingtools #goldtrading

YouTube

- *Title:* An AI Assistant That Refuses to Predict the Market
- *Description:* It explains what the engine measured, flags any number it shouldn't have, and declines the questions nothing can answer. <https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* ai trading assistant, trading software, xauusd

Day 26 · "Your data never leaves"

Prompt — A small gold cube sealed inside a thick block of dark glass on black stone. The camera orbits it fully. There is no seam, no opening, no way in or out. Light refracts through the glass.

TikTok — No account. No server. No upload. 🟡

#privacy #tradingjournal #xauusd

Instagram — Your trades, settings and profile live in your browser on your device.

There's no account server and nothing gets uploaded — which also means nothing is backed up, so export it if the history matters to you.

#privacy #tradingjournal #datasecurity

Facebook — Your trading journal is a diary. It shows your losses, your habits and your account size — and most journalling apps upload all of it. This one has no server to upload to. The trade-off is real: nothing is backed up either, so export it yourself.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#privacy #tradingjournal #datasecurity

YouTube

- *Title:* Your Trading Journal Should Not Live on Someone Else's Server
- *Description:* No account, no upload, no server — and the honest trade-off that comes with it.
<https://bullionedgepro.github.io/bullionedge-pro/>
- *Tags:* trading journal, privacy, data security

Day 27 · "You place the trade. Always."

Prompt — A single human hand, lit warm gold against near-black, reaches out and rests deliberately on a dark polished lever. It holds. It does not pull. Camera slowly pushes in on the hand.

TikTok — There's no button here that places an order. 🟡

#tradingtools #manualtrading #xauusd

Instagram — No broker connection. No API key. No automation.

You copy the entry, stop and targets into your own platform by hand — and those few seconds are the last checkpoint between an idea and a live position. #manualtrading #tradingdiscipline #xauusd

Facebook — This app cannot place, modify or close a trade anywhere. It has no broker integration and never touches your money. That's not a missing feature — the few seconds it takes to copy a plan across by hand is the last moment you get to change your mind.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

#tradingtools #manualtrading #discipline

YouTube

- *Title:* There Is No Button Here That Places a Trade
- *Description:* Why the app deliberately has no broker connection, and what those few manual seconds are worth. <https://bullionedgepro.github.io/bullionedge-pro/>

-

Day 28 · "Sixty seconds before you click"

Prompt — A gold hourglass on black stone, sand running through. Camera pushes in on the narrow neck where individual grains pass one at a time. Ends just as the last grain falls. Precise and unhurried.

TikTok — One minute of checklist. Then decide. 🟡

`#tradingchecklist` `#discipline` `#xauusd`

Instagram — The whole workflow takes about a minute: read the chart, tick what you can genuinely see, read the verdict, take the size.

A minute is nothing. It's also longer than most people spend before risking real money.

`#tradingchecklist` `#discipline` `#goldtrading`

Facebook — Pilots run a checklist before every single flight, including the ten-thousandth. Not because they've forgotten how to fly — because a checklist catches the one thing a confident expert skips. Sixty seconds before you click buy is not a lot to ask.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

`#tradingchecklist` `#discipline` `#tradingroutine`

YouTube

<https://bullionedgepro.github.io/bullionedge-pro/>
 - Tags: `trading checklist`, `pre trade routine`, `xauusd`
-

Day 29 · "Try it before you pay anything"

Prompt — A heavy dark door stands slightly ajar in a black wall, warm gold light spilling through the gap onto the floor. The camera moves toward it steadily and the gap widens as it approaches. Inviting rather than dramatic.

TikTok — Open it. Look around. Decide after. 🟡

`#tradingtools` `#xauusd` `#goldtrading`

Instagram — The landing page shows the whole thing — every screen, every claim, the full risk warning — before you pay anything.

Look at what it refuses to promise. That's the most useful page on the site. `#tradingtools` `#xauusd`
`#transparency`

Facebook — You can see the entire product, including the parts that say what it won't do, before spending anything. If a trading tool's marketing page hides the disclaimer, that tells you something. Ours is in the footer, unhidden, in the same size type as everything else.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

`#tradingtools` `#transparency` `#goldtrading`

YouTube

- *Title:* See Everything Before You Pay — Including What It Won't Do
 - *Description:* The full XAU/USD pre-trade desk, every screen and every limitation, before any subscription. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* `trading software`, `xauusd`, `pre trade analysis`
-

Day 30 · "The trades it stops you taking"

Prompt — Wide shot of black stone under a single warm gold light. A dense scatter of small gold tokens covers most of the surface. One by one they fade out until three remain, brighter than the rest ever were. Camera slowly rises.

TikTok — Its value is the trades you didn't take. 🍷

`#tradingdiscipline` `#xauusd` `#goldtrading`

Instagram — Here is the honest pitch: this software's value is mostly in the trades it stops you taking. That's an unglamorous thing to sell and the true thing to say. If you want a tool that approves everything, there are hundreds.

`#tradingdiscipline` `#xauusd` `#riskmanagement`

Facebook — Thirty days of posts and not one promise of profit — because the product doesn't make one either. What it does is measure the setup in front of you against a fixed rulebook, size the position from the loss you can accept, and refuse the trade when your own rules say no. If that's the tool you've been missing, it's here.

👉 <https://bullionedgepro.github.io/bullionedge-pro/>

`#tradingdiscipline` `#riskmanagement` `#goldtrading`

YouTube

- *Title:* The Real Value Is the Trades It Stops You Taking
 - *Description:* Thirty days, no profit promises. A pre-trade checklist, position sizer and journal for XAU/USD — analysis software, not a signal service. <https://bullionedgepro.github.io/bullionedge-pro/>
 - *Tags:* `trading discipline`, `risk management`, `xauusd`

Posting notes

Best times. Post 30–60 minutes before the London open or the New York open. Your audience is looking at gold charts then, which is the only moment your content is about their current problem.

Hashtags. Exactly three, every time. More reads as reach-farming to both the algorithm and the human. Never use `#forexsignals`, `#getrichquick`, `#profits`, `#fundedtrader` or `#millionaire` — they bring the audience that will not buy and will argue in your comments.

Comments. The first comment on a finance post sets the tone for the rest. Post one yourself immediately: a genuine question, not a link.

If a post takes off, do not chase it with a harder sell the next day. Post the *most* honest thing you have. New audiences arriving from a viral video are deciding whether you are another scam account, and that decision is made on post two.

Reuse. Every video here works as a still — pull one frame, add the same hook. That gets you 60 posts from 30 renders.
